Technical Summary

CS student building open-source **Game AI**, **browser automation**, **data pipelines**, and **full-stack** tools in **Rust**, **Python**, and **TypeScript**. Built public AI tooling and datasets with **670+** and **2.2K+** **GitHub-star** projects, **2.5M+ game datasets**, and **thousands of downloads**, and helped build a **HackUTD 2025 CBRE track winner**. Interested in AI infrastructure, backend systems, developer tooling, and high-performance software.

Professional Experience

AI Engineering Intern @Akari Inc. Tokyo

- Developed a **Gaussian Splitting Model** for 3D object replication, optimizing processing time from **hours to real-time** execution.
- Implemented an **LM optimizer** to refine point cloud density, significantly improving the visual fidelity of generated 3D assets.
- Selected as one of the company's first high school interns.

Projects

Zerogravity - github.com/NikkeTryHard/zerogravity

- Built **ZeroGravity**, an open-source Rust proxy for AI coding tools with OpenAI-, Anthropic-, and Gemini-compatible APIs and bidirectional tool translation.
- Shipped **30 public releases**, reaching **670 GitHub stars**, **45 forks**, and **9k+ GitHub downloads**.
- Engineered a Docker-first cross-platform runtime in **96K+ lines of Rust** for Linux, macOS, and Windows.

AIstudioProxyAPI – github.com/CJackHwang/AIstudioProxyAPI

- Contributed to **AIstudioProxyAPI**, an OpenAI-compatible proxy for Google AI Studio built with **FastAPI**, **Playwright**, and a **Web UI**, powering a repo with **2,245 GitHub stars**, **384 forks**, and **65 releases**.
- Improved reliability through request queueing, request translation, and streaming response handling for browser-driven AI workflows.
- Ranked **#2 contributor with 59 contributions** across architecture refactors, tests, frontend modernization, and UI automation fixes.

Tach-core – github.com/NikkeTryHard/tach-core

- Built **tach-core**, a Rust/Python test hypervisor for pytest using Linux snapshots to cut reset latency from **~200ms to under 50µs**.
- Designed a sandboxed execution model with **Landlock** and **Seccomp** for untrusted tests.
- Validated compatibility on Django's **9,892-test suite**, reducing runtime from **~144s to ~30s**.

Hydra – github.com/NikkeTryHard/hydra

- Built **Hydra**, an open-source Rust riichi mahjong AI project aimed at rivaling **LuckyJ (Tencent)** with open weights.
- Optimized the engine to achieve **2.36x faster single-game latency** and **8.0x higher 4-core batch throughput** than the upstream crate.
- Built end-to-end training and evaluation infrastructure and validated it across 2M+ Tenhou and 4M+ Majsoul games using NSF-sponsorship.

Tenhou-to-MJAI - github.com/NikkeTryHard/tenhou-to-mjai

- Built a **Rust ETL pipeline** that converts Tenhou Phoenix-room logs into MJAI training data, publishing **18 yearly archives** covering **2.5M+ games**.
- Published and validated a **12GB dataset** with **2.72B MJAI event lines**, creating **one of the only available** dataset for mahjong AI research.
- Open-sourced the pipeline and dataset, reaching **22 GitHub stars** and **1,462 GitHub release** in a niche field.

Cura – github.com/armaanamatya/HackUTD2025

- Contributed to **Cura**, a **HackUTD (Largest hackathon in North America) 2025 CBRE track winner**, built with **Next.js**, **FastAPI**, and **MongoDB** for commercial real estate forecasting and analytics.
- Integrated full-stack workflows across a Next.js frontend, Python backend, and agentic document/research features.
- Shipped the project under a **24-hour hackathon timeline**.

Education

The University of Texas at Arlington Arlington, TX

Bachelor of Science, Computer Science

- GPA: **4.0/4.0** Badminton (4th in Texas), ACM, Hackathon.

Kyoto Prefectural Rakuhoku Senior High School Kyoto, Japan

- GPA: **3.84/4.00** Activities and societies: Badminton, ESS Club President, Community Badminton Club, MUN Club President, Debating Club President.
- Shinken Mock Test: **99th percentile in all subjects**.
- Honors in Mathematics, General Accountant for Student Council, Designated SSH (Super Science High School)

Languages

- Japanese (native proficiency)
- Mandarin Chinese (native proficiency)

Skills

- **Languages:** Rust, Python, TypeScript, C
- **Frameworks & Full-Stack:** Next.js, React, FastAPI, MongoDB, PostgreSQL
- **Systems & Tools:** Linux, Docker, Playwright, Camoufox, PyTorch, Burn, CUDA, Seccomp, Landlock, Browser Automation
